

RYNIXSOFT

Digital Talent Management Platform

NAVEEN KUMAR N
UI/UX INTERN

Introduction:

In this sprint, I created low-fidelity wireframes to visualize the structure and layout of the platform based on the insights from Sprint 1.

ROUGH SKETCH:

TASH PAOD

A hand-drawn diagram of a rectangular structure, possibly a building or a container, with a vertical line on the left side. The structure is divided into several horizontal sections. The top section is labeled 'X' and contains the text 'X' and 'X'. Below this is a section labeled 'X' and 'X'. The middle section is labeled 'X' and 'X'. The bottom section is labeled 'X' and 'X'. The diagram is drawn with simple lines and includes some handwritten text and markings.

Admin Panel

Low-Fidelity Wireframes:

Login Screen:

This is the login screen, which acts as the entry point to the platform. Users can enter their credentials to access the system. I kept the design minimal and distraction-free so that users can quickly log in without confusion. This also ensures a smooth first interaction with the platform.

Dashboard Screen:

This is the main dashboard, which is the most important screen in the system. It provides an overview of tasks, progress, and key updates. Based on Sprint 1 findings, one major issue was complex dashboards. So I designed this dashboard with a clean layout, highlighting only essential information. The idea is that users should be able to understand their current status at a glance without feeling overwhelmed.

Task Screen:

This is the Task Screen used by managers and employees. Managers can create and assign tasks with deadlines, while employees can view their assigned tasks and track progress. The design focuses on clear task details and easy navigation, which helps users understand their work quickly.

Admin Screen:

This is the Admin Screen used to manage users and monitor system performance. Admins can add or remove users and generate reports. The layout is designed as a centralized control panel for better management and transparency.

User-Flow:

- User opens the platform
- Enters login credentials
- System authenticates the user
- User is redirected to role-based dashboard
- Manager creates and assigns tasks to employees
- Employees view assigned tasks and start working on them
- Employees submit completed tasks
- Manager reviews submissions and monitors progress
- Admin manages users and monitors overall performance
- System ensures smooth communication and task tracking

Conclusion:

The user flow shows how users move from login to task completion in a structured way. It provides a clear path for each user role to perform their tasks effectively. It ensures smooth navigation and better communication between users. Overall, it improves usability by making the system simple and easy to understand.
